- For Air Shipments: A 30% state of charge (SOC) limit on secondary lithium-ion cells and batteries, including Section II cells and batteries, will now apply. This does not apply to batteries packed with or contained in equipment (Effective April1, 2016).
- o Lithium cells/battery packs must be charged within 45 days of receipt to avoid over discharge.
- Shipping lithium materials must be done through a licensed shipper with appropriate packaging
 & labeling to meet current regulations.

These amendments are detailed in a lithium battery update document found on the International Air Transport Association (IATA) website: http://www.iata.org/whatwedo/cargo/dgr/Documents/lithium-battery-update.pdf

5. Battery Handling Precautions

- ♦ The battery should be stored at half charged state in a dry clean area with good ventilation. If the battery has to be stored for extended period of time (over 3 months), the environmental condition should be 20+/-5°C with 65+/ 20% Relative Humidity.
- ◆ Charging current and voltage should be less than maximum charge current specified in the Product Specification. Charging with higher current or voltage than recommended value may damage the battery and lead to poor performance increased safety risk.
- ♦ Do not reverse the polarity of battery pack leads. Reverse charging may cause damage to the battery and lead to degradation of performance and increased safety risk.
- Please use a charger appropriate for charging lithium batteries.
- ♦ The battery shall be discharged at less than the maximum discharge current specified in the Product Specification. High r current than allowed may reduce performance and lead the battery to over-heat.
- ♦ Always adhere to operating temperature as listed in the Product Specification. Using batteries outside of its operating temperature will lead to reduced performance and increased safety risk.
- ♦ Never short-circuit the battery pack.
- Do not disassemble the battery pack as it may generate internal short circuit in the battery and lead to gassing, fire, or other safety problems.
- If electrolytes leak and come into contact with the skin or eyes, flush with fresh water and seek medical attention immediately.
- Never incinerate or dispose the battery in fire.
- Never allow the battery to come into contact with liquids such as water, soft drinks, juices and etc.
